

QnA APP

ICP:

- solo practitioners and small legal/finance firms
- dealing with heavy load of data
- need quick document search without enterprise complexity

Value Proposition:

- instant doc search vs manual review
- faster client response times
- ability to handle more volume with less time
- reduce cost on enterprise solutions

Core app Functionality:

- document upload: document ingestion and processing
- RAG query engine: semantic search on provided data
- Citation system: source reference for answers

Advanced Functionality:

- Document management: list, delete and update docs
- multiple file handling
- usage analytics
- user authentication

Example Workflow:

- the user uploads his doc/docs
- the text is extracted from the documents
- a query engine is automatically created from this text
- the user asks questions regarding his docs
- they get an answer in return with the exact source reference from their docs

To-Do:

- correctly format the citation returned
- create an endpoint that deletes uploaded data
